IRANIAN MINE AND MINERAL
INDUSTRIES CONSTRUCTION
COMPANY

Winter 2022

Who We Are

IMICO, the youngest subsidiary of **MIDHCO** was established in 2020 in order to become the pivot of second phase development of **MIDHCO** with the aim to increase the steel production capacity of the group to 10 million ton, more than double the current capacity of 4.7 million ton.

In addition to expansion projects, **IMICO** is also involved in the supply of spare parts and consumables of the running plants within **MIDHCO**. Other than establishing a network of reliable local and international manufactures and suppliers, we have also localized the manufacture of some frequently used parts and equipment.

Acting as an entry gate to the large market of **MIDHCO**, we welcome suppliers who seek a local partner for joint production of systems, equipment and components.

More about us

IMICO is a manufacturing and construction management company in the field of mining and mineral industries that has entered the industry with the aim of integrating and managing knowledge and technology transfer. Establishing a connection and integration between all elements and pillars of a project by an Iranian company and ease of interactions within a project, in other words, "*managing the construction of a project*" at all four levels is the main mission of **IMICO**.

The transfer of technology in the field of mining and mineral industries, its absorption and deposition in **IMICO** and its use in future projects are other main goals of the company. **IMICO** has brought together a group of young managers and experts in mining and mineral industries to take a step towards Iran's progress with knowledge, skills, experience and youth.

Our Mission

IMICO is to bring self-sufficiency to **MIDHCO** and progress into a leading position in expansion projects.

Our Motto

We are obsessed with construction!

Our Services

IMICO acts as a construction manager in establishment of plants in mining and mineral industries. Integrating the final services of contractors in various fields and delivery of the plant as a coherent set to the employer, and knowledge management created in all stages of project , are other tasks of **IMICO**.

Each plant is made up of several systems that work together:

IMICO has the mission of manufacturing management in smaller dimensions than a factory and at the level of systems, and plans and the engineering steps required to create a system in accordance with the nature and function of that system, and manages interactions with various contractors to deliver the final system to the employer in a coherent manner.

Equipment in the mining industry has different levels of technology. **IMICO** operates toward equipment manufacturing management by forming a network of engineering, manufacturing and production companies and manages interactions among them.

Manufacturing at the level of part means planning and engineering the various steps in making a part, cooperating with expert contractors to perform each step, preparing the final product and guaranteeing its quality, and delivering the final product to the employer. With a focus on supplier network management, **IMICO** is able to produce parts with appropriate quality and price in the shortest time and according to customer requirements. Reverse engineering is another aspect of **IMICO**'s work in this area.

Achievement

IMICO participated in the 3rd National Iranian Steel Festival and Exhibition as a member of MIDHCO group which was held in Olympic Hotel, Tehran from 8 to 10 of February 2022. **IMICO** was awarded as the Top Supplier of Iron and Steel Chain of Iran status only after a year of its existence. This award, which is the highest of its kind, paves the way for **IMICO** to flourish and harness its full capabilities and continue to become the pivot of MIDHCO expansion.

Highlights

The year 2021, came to an end with tremendous achievements for **IMICO**. Among which were two large EPC projects which were awarded to us as parts of MIDHCO second expansion phase.

The first is Bardsir DRI plant Expansion Project which aims to increase steel production capacity of MIDHCO by 1.7 MTPY.

The second is the construction of a copper extraction plant from the neutralization by-product. This factory is in line with material management projects in the MIDHCO group which will be implemented by **IMICO**.
